Summary

Backend-focused Software Engineering student (FAST NUCES, Class of 2028) with production experience shipping FAST Notes Hub (5,000+ users). Skilled in Java/Spring Boot, PostgreSQL, AWS, and applied ML/LLM systems (scikit-learn, RAG, QLoRA).

Experience

AI/ML Intern — London, UK (Remote)
Crescovate — *Aug 2026 – Present*
- Engineered an end-to-end patient prediction API using FastAPI and PostgreSQL (SQLAlchemy) with data validation, automated cleaning pipelines, and full CRUD operations to train and serve classification models.
- Implemented vector search & retrieval pipelines using NLP embeddings, vector databases, and similarity search to enable semantic querying and LLM-driven analytics on healthcare data.

Software Engineering Intern — Karachi, Pakistan
10Pearls — *July 2026 – August 2026*
- Implemented secure authentication, RESTful APIs, database persistence, profile management, and password reset.
- Applied best practices: JUnit & Mockito testing, SLF4J/Logback logging, global exception handling, Git, SonarQube.

Generative AI Intern — Remote
Arch Technologies — *June 2026 – July 2026*
- Built an LLM chatbot using Streamlit and Ollama with conversation history and session management.
- Developed RAG pipelines and fine-tuned open-source LLMs using QLoRA, PEFT, and Unsloth.

Cloud Computing Intern — Remote
DecodeLabs — *May 2026*
- Deployed Linux servers and static sites on AWS and Azure (EC2, S3, Blob Storage, Nginx); configured IAM via CLI.

Projects

FAST Notes Hub | *TypeScript, React.js, Supabase, Tailwind CSS, GitHub API* — Live
- Shipped a university-wide notes, slides and past-papers platform with **6,000+ active users**, **59K+ events**, **60% engagement**.
- Improved load performance via GitHub API pagination and request batching; designed a normalized Supabase schema with row-level security (RLS) and indexed queries for sub-second search, behind a responsive Tailwind UI.

Healthcare Data Cleaning & Prediction Pipeline | *Python, Pandas, scikit-learn, FastAPI, PostgreSQL* — GitHub
- Built an end-to-end ML pipeline that cleans raw patient CSV data (deduplication, missing values, normalization) and generates automated data-quality validation reports.
- Ran statistical feature analysis and benchmarked multiple scikit-learn classifiers to predict patient conditions (Asthma, Diabetes, Heart Disease, Hypertension), reaching **94% accuracy**; saved the best model with preprocessing artifacts.
- Exposed CRUD and prediction endpoints via FastAPI and PostgreSQL, returning conditions with probability scores.

GetJob | *Spring Boot, PostgreSQL, Docker, AWS (EC2, S3, RDS), GitHub Actions* — GitHub
- Engineered a scalable full-stack job-search platform (Spring Boot, PostgreSQL), optimizing API performance via indexing, schema tuning, and stateless REST architecture.
- Deployed containerized backend services to AWS (EC2, RDS, S3) with automated CI/CD and zero-downtime builds (GitHub Actions).

Education

National University of Computer and Emerging Sciences (FAST NUCES) — Karachi, Pakistan
Bachelor of Science in Software Engineering — *Expected May 2028*
- Relevant coursework: Data Structures & Algorithms, Artificial Intelligence, Design and Analysis of Algorithms, Database Systems, Operating Systems

Whales College — Karachi, Pakistan
A Levels – Cambridge International Examinations — *May 2022 – May 2024*

Technical Skills

Languages: Java, JavaScript, TypeScript, Python, C++, C, HTML, CSS, SQL
Frameworks/AI-ML: Spring Boot, FastAPI, React.js, scikit-learn, Pandas, PyTorch, Transformers, QLoRA, Unsloth, RAG
Cloud & DevOps: AWS, Azure, Docker, GitHub Actions, Railway, Vercel
Databases: PostgreSQL, Supabase, MongoDB, Oracle SQL
Testing & Concepts: JUnit, Jest, REST APIs, JWT Auth, RBAC, Row-Level Security, Agile/Scrum
